

Agenda

House Keeping

Lectures are recorded

However, this is a blended learning environment so the content of the lecture recordings may not be very useful to you.

ISOM and University software servers

It is up to you to check out and see what arrangements the University has for you in terms of software licenses.

Check in with the library.

Turnitin

We will be using Turnitin for the learning journal reflective writing, peer learning and also the group project.

You also have access to grammar checking software, grammarly.

Readings

There are lots of readings on the list

- Don't panic!
- Each week the module will indicate the Prereading
- Please Try to complete these before class
- There are also additional readings for interest and research.
- There is a quiz to be completed each week

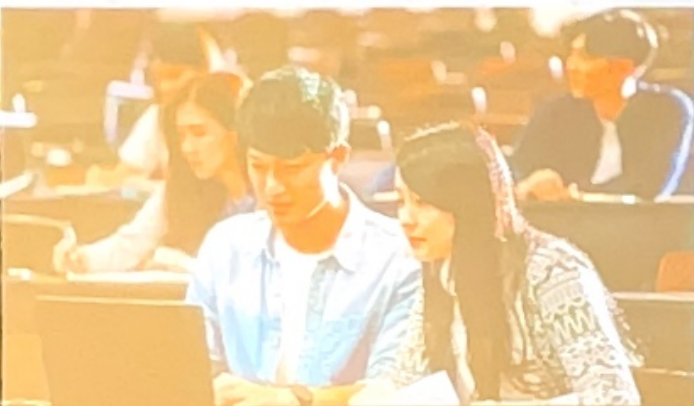

They are there to give you:

- To give you background
- Depth and interest
- Material, starting points for our discussion in class
- Further research and assessments

Class Conduct

- Each week
 - Summary and basic introduction
 - Guest lecturers
 - In-class Quizzes
 - Discussion and activities
 - Tests
 - Work and assistance on assessments

Reflective Learning Journal Portfolio

40%

Journals are to be written in a series assignment submissions.

These will be your reflections on the previous fortnight's content, research, reading and assignments that you have done.

Included in these submissions you must include additional journal entries which indicate your thoughts and plans about the feedback you have received on an assessment.

2 Learning Journal Portfolio Submissions

1 collated Portfolio Submission with an additional reflection and content attached.

This is submitted at the end of the semester.

Project 30%

- Group Projects – Register by Week 3
- Three parts:
 - 1 proposal report
 - 1 report
 - group presentation.
- To analyze a business within an industry sector
- Create an idea to use a digital innovation(s) in a business sector.
 - In doing this you should research the business
 - Do not approach an actual business!
 - Research a wide range of digital innovations
 - Decide which apply in this context
 - Create a small prototype to demonstrate your suggestions.

no ID number, name, in document.

Peer
Review
10%

- For each of the Journal submissions
 - 2 Peer Reviews
 - Write approx. 150 words for each review.
- Journal submissions 17.00 pm
Peer reviews straight after.

Peer Learning 10%

- In groups
- Take the class for about 15 minutes
- Resources are available for you to design your lesson
- Feedback and assistance will be given before and after your class
- Register for your groups today first peer learning in Week 3

Class Expectations

Readings

Please try to do the readings before class

Arrive on time

House rules

Digital Innovation

- ▶ Digital innovation refers to the application of digital technology to create new business processes, products, or services.
- ▶ According to Fichman et al.
 - ▶ "product, process, or business model that is perceived as new, requires some significant changes on the part of adopters, and is embodied in or enabled by IT" (Fichman et al., 2014)
- ▶ Scope includes emerging technologies such as AI, blockchain, IoT, and cloud computing.

Key Components of Digital Innovation

Fichman, R. G., Dos Santos, B. L., & Zheng, Z. (2014). Digital Innovation as a Fundamental and Powerful Concept in Information Systems Curriculum. *MIS Quarterly*, 38(2), 329-353.

Yoo, Y., Boland, R. J., Jr., Lyytinen, K., & Majchrzak, A. (2012). Organizing for innovation in the digitized world. *Organization Science*, 23(5), 1398+. <https://link.gale.com/apps/doc/A305454613/ITOF?u=learn&sid=bookmark:ITOF&ed=5c368e65>

Innovation vs. Digitalisation vs. Digital Transformation

A good way to remember the difference is that digitisation is about data, digitalization is about processes, and digital transformation is about business models.

Innovation: Creating something new or significantly improving an existing product/process (e.g., Self-driving cars).

Digitalisation: Using digital technologies to improve existing business processes (e.g., Converting paper records to digital databases).

Digital Transformation: A complete change in business models and processes driven by digital technologies (e.g., Netflix shifting from DVD rentals to streaming).

Gredillas, M., & Thomas, L. D. W. (2023). Distinguishing digitisation and digitalization: A systematic review and conceptual framework. *The Journal of Product Innovation Management*, 42(1), 112-143. <https://doi.org/10.1111/jipm.12699>

Viol, G. (2019). Understanding Digital Transformation: A Review and a Research Agenda. *Journal of Strategic Information Systems*, 28(2), 118-144.

Types of Innovation

▶ Linear Innovation

- ▶ Follows a sequential process from research to market, starting with basic research to generate knowledge, followed by applied research to solve practical problems. The process continues with the development of tangible products, leading to production and marketing, where innovations are introduced to the market.

▶ Incremental Innovation

- ▶ Involves implementing multiple small-scale improvements or upgrades to existing products, services, processes, or methods. These enhancements improve functionality, efficiency, and overall value without fundamentally changing the core offering.

phone Camera.

▶ Disruptive Innovation

- ▶ Creates new markets by displacing existing technologies.
- ▶ Involves a process change market. where a smaller company with fewer resources successfully challenges established businesses by entering the bottom of the market and moving up, eventually displacing incumbent competitors.

online Taxi

▶ Radical Innovation

- ▶ Involves the introduction of groundbreaking ideas, products, or processes that fundamentally transform industries or create entirely new markets. This form of innovation goes beyond incremental improvements, offering substantial advancements that redefine existing paradigms.

Types of Innovation

► Open Innovation

- A paradigm that promotes the use of external and internal ideas to advance technology and product development. It involves organizations collaborating with external partners such as other companies, academic institutions, and customers to leverage distributed knowledge and accelerate innovation

Group Activity

- ▶ Each group will discuss and identify real-world examples of digital innovation in their assigned domain and discuss Why digital innovation matters from one of the following perspectives
- ▶ Economic impact
- ▶ Business Impact
- ▶ Societal Impact
 - ▶ consider both positive and negative consequences
- ▶ Each group presents their findings in a 3-minute pitch.😊
